

Engineering Onboarding Checklist

Week 1 priorities

- Clone the platform repositories and run the bootstrap script
- Confirm local access to staging APIs, analytics, and feature flags
- Join the incident rotation channel and release alerts channel
- Review the board workflow: Backlog, In Progress, Review, Done

Environment Setup

- Install package manager, language runtime, and container tooling
- Run the seed import against a local database snapshot
- Verify image, PDF, DOCX, and SVG previews in the app
- Capture any missing environment variables in the team handbook

First Deliverable

- Pick a low-risk UI or telemetry issue
- Pair on the first production-adjacent change
- Add a test that fails before the fix and passes after the fix
- Document any rough edges found during setup
